STYLEman
Global ERP for the apparel industry

As an apparel company, it is crucial that you have full visibility of your entire supply chain. Today's clothing and footwear companies need real-time information to make informed decisions and to be able to track where the garment is in the import and export processes.

STYLEman V10 lets you do just that. The latest version of our software delivers powerful web-enabled functionality, so that your staff and trading partners can benefit from full access to STYLEman from anywhere in the world, via the Internet.

Anytime, anywhere access makes STYLEman V10 particularly useful for companies wanting to work more closely with their partners around the world. Remote access to supply chain information makes it easier for organisations to control their offshore manufacturing and/ or their near-sourcing operations, as well as helping businesses increase accuracy.

Your company can reduce logistics costs, speed up delivery times and improve control over the logistics process with STYLEman V10. The solution delivers real-time management information – right from the purchase of raw materials to manufacturing, costing and distribution – to ensure you always make the best business decisions.

"

With STYLEman V10, we're leapfrogging the competition. STYLEman is established, – hugely scaleable, highly functional and built today for tomorrow's business

"

Tony Parkinson,
Managing Director

Support for the global supply chain

The global nature of apparel companies today means that different stages of production often occur in multiple locations in a number of geographies. As a result, it is hard to keep track of what is going on within the supply chain. This is where STYLEman V10 comes in.

Option Systems Limited has launched STYLEman V10 to address the challenges of operating a global supply chain. It has been developed to extend the functionality of our proven STYLEman solution, and incorporates a number of innovative modules.

Super Enquiries Tool – get the data you want when you want it

STYLEman V10 has been built with the specialist knowledge of industry experts, who know exactly what is important to your company and to your staff. When they want to know exactly where a particular product is, you need to know that this can be achieved quickly and easily. Search capabilities have been greatly enhanced in the super enquiries tool to present as much data as possible to the user in a clear format, highlighting potential problems and allowing the user to investigate further at the click of a mouse.

The tool also allows users to have multiple windows open at any one time, enabling staff to make multiple product enquiries without having to open and close different windows, greatly increasing user efficiency. Usage of colour has been enhanced in order to present large quantities of complex information as clearly as possible, and highlight potential problem areas at a glance.

Desk-top integration of the Super Enquiries tool also allows for seamless export of information to standard productivity tools such as Microsoft Excel.

Superior Session Control

STYLEman V10 gives you far greater control over individual workloads, allowing you to work flexibly on several tasks simultaneously. STYLEman also has highly robust transaction logging and security; should an internet connection fail, you can reconnect when it is available again and resume from exactly where you left it.

The session control module enables STYLEman V10 to track what you are doing as you are doing it, and individual sessions can be monitored, suspended or resumed.

'My STYLEman' personalisation

STYLEman V10 allows you to personalise your desktop according to your own needs – users can have a 'favourites' section and can adjust their preferences and settings individually. It's natural that the needs of your Finance department will differ greatly from other users, such as designers. STYLEman V10 can be adapted to precisely meet the needs of every department, and tailored to reflect each user's preferences.

Shortcuts are available for you to monitor your workflow tasks, your recent reports and recurrent tasks, making each user's home page the control centre for their day.

Key functionality

STYLEman V10 offers a complete management solution for apparel companies, monitoring the performance, management and results of your company's processes on an enterprise-wide level, establishing where efficiency gains can be made.

Scaleable from 5 to more than 1000 users, and utilised by over 100 companies worldwide, STYLEman's flexibility allows it to grow and change as your company develops.
